

BANKNOTE BANDING MACHINE WITH PRINTING

Characteristics:

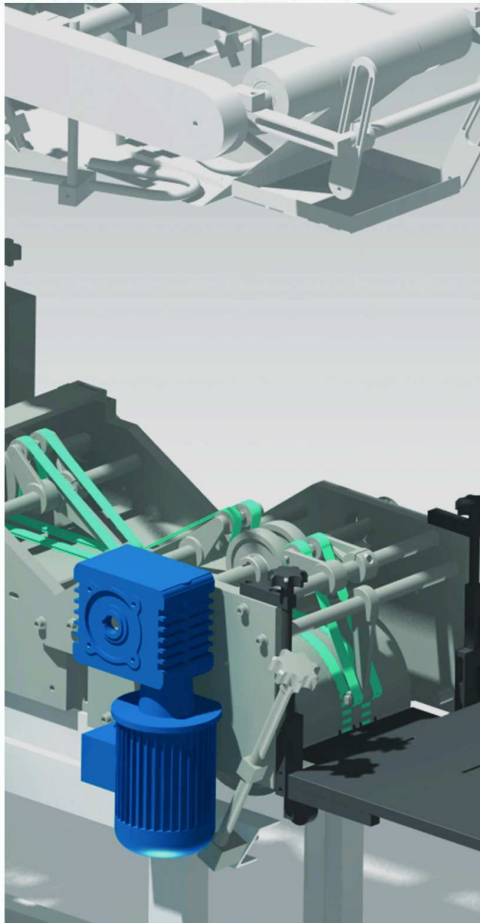

Capacity:	1500 pieces/min
Cut lenght:	b = 40mm, or as requested
Paper strap width:	B = 130-280mm
Paper:	70 g/m ²
Number of colours:	2
Machine dimensions:	LxHxB = 4000x2000x1000 mm
Power:	6kW
Required working pressure:	6bar
Operators required:	1

AS AGREED UPON

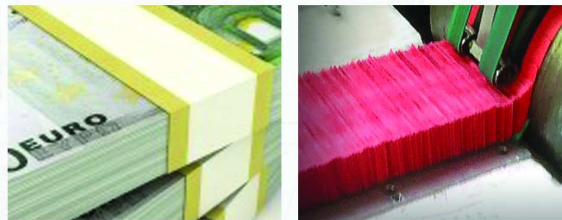

BANKNOTE BANDING MACHINE WITH PRINTING

Description:

The primary purpose of the machine is to make a closed ring out of paper which is pre printed in two, (if specified, 3) colours.

Banknote bands are formed from a roll of paper, printed, cut, and finally stuck together in the shape of a ring.

The function of this machine can be divided into individual sections which perform independent operations:

TWO COLOUR PRINTING

A paper strip ranging from 130 to 280 mm in width is unrolled, and winds through two sets of paint rollers. Each set applies colour from a cliché, which in turn creates the imprint wanted (text, hallmark, marker, toning, etc.)

PAPER SEGMENT STACKING

The paper segments cutouts are banknote bands, which are directed to the machine module which provides regular stacking, i.e. exiting machine. When exiting the machine, bands are vertically oriented and directed into a continuous line on the stacking table. When on the table, the segments are ready for the next packing stage.
