AS AGREED UPON**

FLEXO PRINTING MACHINE REVITALIZATION

Description:

Flexo printing machine manufacturers whose machines we have worked on include:

- **Fischer and Krecke** (13DF, Optima, Express Standard, Piccolo and other.), Germany
- **Windmoller and Hoelscher**, Germany
- **CMR**, Italy and other.

Revitalization of flexo printing machines is one of our company's primary activities. The knowledge and experience in this area have been acquired during many years of working in the field of printing technology, machining and electric-control elements on the west-European markets.

According to client's demands and after inspection, defects in the machine are identified and work takes place in stages agreed upon, such as detailed cleaning, procurement of equipment parts, reconstruction of elements or their manufacturing, replacement, and protection, lubrication, setting up, testing and commissioning of the machine.

As well as revitalisation, we also do reconstruction:

- Increasing print colour numbers,
- Drying system installment,
- Machine speed increasing,
- Automation rate increasing,
- Safety level enhancement and other
